

## **Guide for Inspection Qualification Program**

The Inspectors Qualification Program is part of UDOT's Quality Assurance Program and required by 23 CFR 667.

This guide will outline the process and the requirements to become qualified to perform inspection duties for the Utah Department of Transportation (UDOT).

Training and qualification is necessary to maintain qualified project personnel. UDOT has developed this training and qualification program to provide both employees and consultants with the expertise needed to inspect projects.

All Inspectors assigned inspection duties on a UDOT or local government project are required to take the following classes to be IQP certified:

- Inspector Training General
- Plan Reading
- Survey Concepts
- IQP Daily Progress Report
- Work Zone Safety
- Introduction to PCC Paving
- Environmental Control Supervisor
- IQP Crash Cushion (in-person training)
- Partnering (in-person training and a one-time only class with a lifetime certification)

Registration for the Inspectors Qualification Program (IQP) is available through the [UDOT Learning Portal](#). **To register for Partnering, please refer to the American General Contractors Association's [website](#). Registration and payment must be done through them.**

### **UDOT Certification Chart**

You may check the status of your IQP / Partnering / CEMT / ECS on the [UDOT Certification Chart](#). This chart allows you to look up an individual or a company.
